

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims:

1. – 25. (Canceled)

26. (Currently Amended) A receiver comprising:

receiving means for receiving digital content and attributive information;

remote controller means for remotely controlling the receiving means, the remote controller means having a display unit and a removable recording medium;

selecting means for comparing first selective information with the attributive information;

a filtering means for filtering the attributive information on the basis of the first selective information to select the digital content;

recording means for recording digital content on the receiver, said digital content selected on the basis of the first selective information; and

removable recording medium control means for recording at least one of said selected digital content on the removable recording medium,

~~control means for reproducing particular digital content from the selected digital content recorded on the receiver, said particular digital content determined based on a comparison of second selective information with the attributive information~~

wherein the selected digital content recorded on the removable recording medium is reproducible on the display unit of the remote controller means.

27. (Currently Amended) The receiver of claim 26, ~~wherein the further~~
~~comprising~~ removable recording medium control means is configured to store address
information of digital content and client identification.

28. (Canceled)

29. (Currently Amended) A receiver comprising:
a receiver unit configured to receive digital content and attributive information;
a remote controller configured to remotely control the receiver unit, the remote controller
having a display unit and a removable recording medium;
a selector configured to compare first selective information with the attributive
information;
a filter configured to filter the attributive information on the basis of the first selective
information to select the digital content;
a recorder configured to record digital content on the receiver unit, said digital content
selected on the basis of the first selective information; and
a removable recording medium controller configured to record at least one of said
selected digital content on the removable recording medium,
~~a controller configured to reproduce particular digital content from the selected digital~~
~~content recorded on the receiver, said particular digital content determined based on a~~
~~comparison of second selective information with the attributive information~~
wherein the selected digital content recorded on the removable recording medium is
reproducible on the display unit of the remote controller.

30. (Currently Amended) The receiver of claim 29, wherein the further comprising a removable recording medium is configured to store address information of digital content and client identification.

31. (Canceled)

32. (Currently Amended) A method of receiving digital content comprising:
receiving digital content and attributive information at a receiver;
remotely controlling the receiver with a remote controller having a display unit and a removable recording medium;
comparing first selective information with the attributive information;
filtering the attributive information on the basis of the first selective information to select the digital content;
recording selected digital content on the ~~first~~ receiver, said digital content selected on the basis of the first selective information;
recording said selected digital content on the removable recording medium, and
reproducing particular digital content from the selected digital content recorded on the first receiver, said particular digital content determined based on a comparison of second selective information with the attributive information on the display unit of the remote controller.

33. (Currently Amended) The method of claim 32 further comprising storing address information of digital content and client identification on a the removable recording medium.

34. (Previously Presented) A digital content distribution method comprising:

transmitting digital content and attributive information;

receiving the digital content and the attributive information on a remotely located first receiver;

remotely controlling the receiver with a first remote controller having a display unit and a removable recording medium;

comparing first selective information by the first receiver based upon the attributive information;

filtering the attributive information on the basis of the first selective information to select the digital content;

recording selected digital content on the first receiver, said digital content selected on the basis of the first selective information;

recording said selected digital content on the removable recording medium, and

~~reproducing particular digital content from the selected digital content recorded on the first receiver, said particular digital content determined based on a comparison of second selective information with the attributive information on the display unit of the first remote controller.~~

35. (Currently Amended) The transmitting method of claim 34 further comprising storing address information of digital content and client identification on the removable recording medium of the first receiver.

36. (Currently Amended) The transmitting method of claim 35 further comprising:

providing the removable recording medium to a second-~~receiver~~ remote controller associated with a second receiver; and

automatically receiving, without user intervention, at the second-~~receiver~~ remote controller, digital content based on the address information of digital content and client identification stored on the removable recording medium ~~of the first receiver~~.

37. (Previously Presented) The receiver of claim 29, wherein the controller compiles the attributive information of the digital content that is reproduced by a user, analyzes a taste of the user based on the compiled attributive information, and changes a weighting of a value of a parameter of the first selective information based on the analysis of the user's taste, thereby changing the filter configured to filter the attributive information to select the digital content.

38. (Previously Presented) The receiver of claim 29, wherein a parameter of the first selective information is set to exclude programs from being recorded and reproduced.

39. (Previously Presented) The receiver of claim 30, wherein the digital content includes commercial information and the controller records selected commercial information based on the first selective information in a dedicated area of the recording medium.

40. (Previously Presented) The receiver of claim 39, wherein the selected commercial content is reproduced within a predetermined time frame of the commercial message in a program.
